

# Rangefinder by Carl Zeiss

## The Multitalented Victory Diarange Scopes

### Victory Diarange M 2.5-10x50T\*

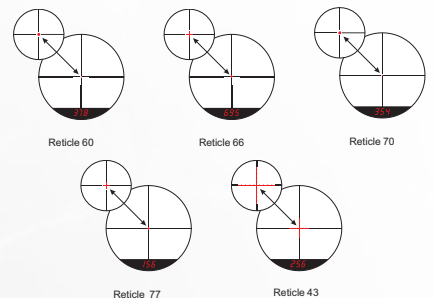

Thanks to a smaller entrance pupil, the Diarange M 2.5-10x50T\* is extremely lightweight and more compact than its predecessor. With this innovation by Carl Zeiss, multifunctional optics have qualified for alpine hunting and physically demanding terrain.

### Victory Diarange M 3-12x56T\*

Increased performance in lowlight conditions for more detailed and higher contrast images, when game becomes active.

### Victory 8x26T\* PRF

## Victory RF Binoculars

The combination of speed and accuracy is unique. Press range finder button once, put the aiming point on the target, release the button, and the measured distance (up to 1,200 metres) appears in the centre of the field. The measured distance is placed directly into the field of view by a self-illuminating LE display. Hold the button for more than three seconds and the RF enters Scan Mode for continuous measurement of the distance to small or moving targets.

## Ballistic Information System (BIS™)

With the SET button one of the six ballistic programmes can be selected depending on the ammunition being used. The innovative system allows the selection of both ballistic curve and sight-in distance independently of each other, enabling the use of both conventional 100 yard zeroes, and the 'most favorable zeroing range' (GEE).

## Victory 8x26 T\* PRF

In addition to the first-class image quality typical of ZEISS products, it is now possible to measure a range at the push of a button. Furthermore, the new Victory PRF features the integrated electronic ballistic calculator that shows hunters the correction value of the point of impact depending on the distance to the target and the calibre used.

This sophisticated combination comes in a compact monocular. With the new Victory PRF, Carl Zeiss has created a compact, lightweight instrument that provides a real advantage in the field.
